INDEX

Acid phosphate, effect of on corn, wheat and soybeans in a loam soil, 63–66
Acidity—
  and alkalinity produced by sulfur oxidation, 316–317
  due to the solid phase, 338–341
Adsorption—
  selective, 345
  power of soils, 349
Allison, F. E. (paper), Some Availability Studies with Ammonium Phosphate and its Chemical and Biological Effects upon the Soil. See Ammonium Phosphate, Some Availability Studies, etc., 1–80
Ames, J. W., and Richmond, T. E. (paper), Sulfofication in Relation to Nitrogen Transformations. See Sulfofication, etc., 311–321
Amino-nitrogen in the soil, the effect of heat on, 200–207
Ammo-phos—
  comparative availability in sand cultures, 55
  composition, 4–5
Ammonia—
  On the Extraction of, from Soil (paper), T. E. Richmond, 481–486
  extraction from peat, 485–486
  extraction of ammonia from Paulding clay, 485
  methods, 482–485
  Studies on the Correlation between the Production of Carbon Dioxide and the Accumulation of, by Soil Organisms (paper), J. R. Neller. See Carbon Dioxide, Studies on, etc., 225–241
  the effect of heat on, in soils, 200–206
Ammonification—
  as affected by ammonium phosphate, 15–18
  as affected by oxidation of sulfur, 319–321
Ammonium phosphate—
  effect on ammonification, 15–18
  effect on different crops on loam soil, 63–66
  effect on germination, 62
  effect on the germination of corn in the field, 74
  nitrification of, 5–15
  utilization by soil fungi, 18–19
  Some Availability Studies with, and its Chemical and Biological Effect upon the Soil (paper), F. E. Allison, 1–80
Ammo-phos—
  comparative availability in sand cultures, 55
  composition, 4–5
  Ammonium phosphate—
    effect on ammonification, 15–18
    effect on corn, wheat and soybeans in a loam soil, 63–66
  effect on germination, 62, 74
    nitrification of, 5–15
    utilization by soil fungi, 18–19
  availability of nitrogenous fertilizers, 20–51
  availability of various phosphate fertilizers, 56–62
  nitrification in soils, as affected by lime, 12–15
  nitrification of nitrogenous fertilizers, 5–15
  nitrogenous fertilizers, effect on germination and plant growth, 67–77
  phosphate fertilizers, availability in quartz sand under greenhouse conditions, 61–62
  sodium nitrate, comparative availability in sand cultures, 55
  soil reaction, as affected by fertilizers, 51–54
Ammonium sulfate—
  availability of nitrogen in, 291, 301
  Effect of, in Nutrient Solution on the Growth of Soybeans in Sand Cultures (paper), M. I. Wolkoff, 123–150
  concentration of nutrient solution, 128–133
  dry weight of roots, 138–141
  dry weight of tops, 135–137
  freezing-point depression of Tottingham's solutions, 129–133

general appearance of the plants, 133–135
method employed, 124–127
osmotic requirements of cultures, 127
solutions used, 127–128
transpiration and water requirements of plants, 141–145
The Influence of, on the Germination and the Growth of Barley in Sand and Soil Cultures Kept at Different Moisture Contents and at Various Osmotic Concentrations of the Soil Solution (paper), M. I. Wolkoff, 421–479
effect of moisture content of Sassafras light sandy loam on the growth of barley, with ammonium sulfate as the source of nitrogen, 434–440
effect of moisture content of sea sand on the growth of barley, with ammonium sulfate as the source of nitrogen, 427–434
effect of moisture content on the germination of barley seeds in sand and different soils, 457–465
effect of various amounts of certain nutrient and non-nutrient salts on the efficiency of ammonium sulfate for the growth of barley in sand cultures, 450–457
osmotic concentration of the soil solution, and its effect on the growth of barley plants in sea sand and Sassafras light sandy loam, 440–450
review of literature, 421–427
effect on corn, wheat and soybeans in a loam soil, 63–66
Amphoteric character of soils, 349–350
Analysis—
chemical, and present production of soils, 412–413
complete, and continued production of soils, 413–414
Aspergillus niger, production of carbon dioxide by, 362–375
Availability—
of calcium as affected by soil acidity, 174–175
of nitrogen in nitrate of soda, ammonium sulfate, dried blood and farm manures, 291–301
of various nitrogenous fertilizers, 20–51
of various phosphate fertilizers, 56–62
Studies with Ammonium Phosphate and its Chemical and Biological Effects upon the Soil, Some. See Ammonium phosphate, Some Availability Studies, etc., 1–80

Bacteria, Potassium Requirements of (paper), G. P. Koch, 219–224
Bacterium lactis viscosum, The Occurrence of, in Soil (paper), C. R. Fellers, 487–488
Base, general relation to soil fertility, 351–353
Blair, A. W., Lipman, J. G., and (paper), Twenty Years' Work on the Availability of Nitrogen in Nitrate of Soda, Ammonium Sulfate, Dried Blood and Farm Manures, 291–301
Bremen method for analysis of peat soils, 213
Burd, J. S. (paper), Chemical Criteria, Crop Production and Physical Classification in two Soil Classes. See Chemical Criteria, etc., 405–419

Calcium carbonate, effect on the accumulation of available phosphoric acid from floats and sulfur-floats combinations, 280–282
Calcium Oxide and Calcium Carbonate—
The chemical effects of, on the soil: I. The Effect on Soil Reaction (paper), D. R. Hoagland and A. W. Christie, 379–382
The Chemical Effects of, on the soil: II. The Effect on Water-Soluble Nutrients in soils (paper), A. W. Christie and J. C. Martin. See Water-Soluble Nutrients, etc., 383–392
Cane Sugar, The Inversion of, by Soils and Allied Substances and the Nature of Soil Acidity (paper), F. E. Rice and S. Osugi. See Inversion of Cane Sugar, etc., 333–358.
Carbon Dioxide—
Studies on the Correlation between the Production of, and the Accumulation of Ammonia by Soil Organisms (paper), J. R. Neller, 225–241
apparatus and its manipulation, 226–229
comparison of duplicate determinations

of carbon dioxide production and of ammonia accumulation, 231
correlation between carbon dioxide production and ammonia by pure cultures of bacteria and fungi and by soil infusions, 236–238
methods, 229–230
oxidizing and ammonifying power of several pure cultures, 231–235
The Production of, by Molds Inoculated into Sterile Soil (paper), R. S. Potter and R. S. Snyder, 359–377

Carbonic Acid Gas in Relation to Soil Acidity Changes (paper), H. A. Noyes and L. Yoder, 151–161
Acidity methods, 153–154
Soil acidity as influenced by cropping, fertilization, liming and carbon dioxide, 154–157

Catalytic agents, effect on the accumulation of available phosphoric acid from floats and sulfur-floats combinations, 274–280

Chaetomium, production of carbon dioxide by, 362–371

Chemical composition of soils and physical classification, 414–416

Chemical Criteria, Crop Production and Physical Classification in Two Soil Classes (paper), J. S. Burd, 405–419
chemical analysis and present production, 412–413
chemical composition and physical classification, 414–416
chemical criteria and physical texture, 407
complete analysis and continued production, 413–414
form of reported results, 407
tabulation of data, 406–411
time of examination of soils, 406

Chemical Effects of CaO and $CaCO_3$ on the Soil, The, I. The Effect on Soil Reaction (paper), D. R. Hoagland and A. W. Christie, 379–382

Chemical Effects of CaO and $CaCO_3$ on the Soil, The, II. The Effect on Water-Soluble Nutrients (paper), A. W. Christie and J. C. Martin. See Water-Soluble Nutrients, etc., 383–392

Christie, A. W., and Martin, J. C. (paper), The Chemical Effects of CaO and $CaCO_3$ on the Soil: II. The Effect on Water-Soluble Nutrients in Soils. See Water-Soluble Nutrients, etc., 383–392

Christie, A. W., Hoagland, D. R., and (paper). The Chemical Effects of CaO and $CaCO_3$ on the Soil: I. The Effect on Soil Reaction, 379–382

Clapp, F. C., Rost, C. O., and (paper), Determination of Lime and Phosphoric Acid in Peat Soils: Comparison of Jönköping with Bremen Method. See Peat Soils, etc., 213–218

Composts—
effect of fineness of division upon the availability of phosphoric acid, 268–269
Experiments with Sulfur-Phosphate composts conducted under Field Conditions (paper), J. G. Lipman and H. C. McLean. See Sulfur Phosphate Composts, etc., 243–250
of floats, sulfur and soil, 264–266

Criteria, Crop Production and (paper), J. S. Burd. See Chemical Criteria, etc., 405–419

Crop Production, Chemical Criteria, and Physical Classification in Two Soil Classes (paper), J. S. Burd. See Chemical Criteria, etc., 405–419

Dried blood, availability of nitrogen in, 291–301

Electric current, action of, in decomposing substances in suspension, 342–345

Fellers, C. R. (paper), The Occurrence of *Bacterium lactis viscosum* in Soils, 487–488

Ferric chloride, the nitrogen distribution of fibrin hydrolyzed in the presence of, 163–167

Fertility of the soil as affected by soil acidity, 170–173

Fertilizers, effect on soil reaction, 51–54

Fertilizers—
nitrogenous, nitrification of, in soil, 5–15
comparative availability of, 20–51

Fetzer, W. R., Morrow, C. A., and (paper), The Nitrogen Distribution of Fibrin Hydrolyzed in the Presence of Ferric Chloride. See Nitrogen Distribution, etc., 163–167

Floats—
sulfur and soil composts, 264–266

sulfur combinations, 261–264
Freezing-point depression of Tottingham's solutions, 129–133

Gericke, W. F., Lipman, C. B., and (paper), The Significance of the Sulfur in Sulfate of Ammonia Applied to Certain Soils, 81–86
Germination—
as affected by ammonium phosphate, 62
as affected by nitrogenous fertilizers, 67–77
Growth of Plants, Soil Acidity: I. Its Relation to (paper), E. Truog. See Soil Acidity: I. Its Relation, etc., 169–195

Harmer, P. M. (paper), The Relative "Rawness" of Some Humid Subsoils. See Subsoils, etc., 393–402
Heat, The Effect of, on some Nitrogenous Constituents of Soil (paper), R. S. Potter and R. S. Snyder, 197–212
description of the soils, 199–200
methods of analysis, 199
Hoagland, D. R., and Christie, A. W. (paper), The Chemical Effects of CaO and $CaCO_3$ on the Soil: I. The Effect on Soil Reaction, 379–382
Hydrous oxides, action of, on cane sugar, 345

Inoculation of sulfur-floats composts, 269–272
Inversion of Cane Sugar by Soils and Allied Substances and the Nature of Soil Acidity, The (paper), F. E. Rice and S. Osugi, 333–358
acidity due to the solid phase, 338–341
action of electric current in decomposing substances in suspension, 342–345
adsorptive power, 349
amphoteric character of soils, 349–350
complexity of properties of the soil mass, 350–351
hydrous oxides on cane sugar, 345
general relation of base to soil fertility, 351–353
inversion and selective adsorption, 345
inversion by other solid substances, 341–342
inversion of cane sugar by soils, 334–336
significance of inverting power of soils, 347–348
soil extracts, the character of, 336–338

Itano, A., and Ray, G. B. (paper), A Method for the Counting of Certain Protozoa in the Soil, 303–310

Jönköping method for analysis of peat soils, 214

Koch, G. P. (paper), Potassium Requirements of Bacteria, 219–224

Lime—
determination of, in peat soils, 213–218
effect on the rate of nitrification in soils, 12–15
requirements of plants, 179–191
Liming acid soils, 183–191
Lipman, C. B., and Gericke, W. F. (paper), The Significance of the Sulfur in Sulfate of Ammonia Applied to Certain Soils, 81–86
Lipman, J. G., and Blair, A. W. (paper), Twenty Years' Work on the Availability of Nitrogen in Nitrate of Soda, Ammonium Sulfate, Dried Blood and Farm Manures, 291–301
Lipman, J. G., and McLean, H. C. (paper), Experiments with Sulfur-Phosphate Composts Conducted under Field Conditions. See Sulfur-Phosphate Composts, etc., 243–250

Malaria, The Importance of, to Agriculture, and Studies on Malarial Soil (paper), G. Rossi, 323–332
Manures, availability of nitrogen in, 291–301
Martin, J. C., Christie, A. W., and (paper), The Chemical Effects of CaO and $CaCO_3$ on the Soil: II. The Effect on Water-Soluble Nutrients in Soils. See Water-Soluble Nutrients, etc., 383–392
McLean, H. C., Lipman, J. G., and (paper), Experiments with Sulfur-Phosphate Composts Conducted under Field Conditions. See Sulfur-Phosphate Composts, etc., 243–250
McLean, H. C. (paper), The Oxidation of Sulfur by Microorganisms in its Relation to the Availability of Phosphates. See Sulfur, The Oxidation of, etc., 251–290
Microorganisms, The Oxidation of Sulfur by, in its Relation to the Availability

of Phosphates (paper), H. C. McLean. See Sulfur, The Oxidation of, etc., 251–290
Moisture Content of Sassafras light sandy loam, effect on the growth of barley, 434–440
Moisture content of sea sand, effect on the growth of barley, 427–434
Molds, The Production of Carbon Dioxide by Molds Inoculated into Sterile Soil (paper), R. S. Potter and R. S. Snyder, 359–377
Monobasic Phosphates towards Soybeans Grown in Soil- and Solution-Cultures, Toxicity of (paper), J. W. Shive. See Toxicity of Monobasic Phosphates, etc., 87–122
Morrow, C. A., and Fetzer, W. R. (paper), The Nitrogen Distribution of Fibrin Hydrolyzed in the Presence of Ferric Chloride, 163–167
Mucor, the production of carbon dioxide by, 362–371

Neller, J. R. (paper), Studies on the Correlation between the Production of Carbon Dioxide and the Accumulation of Ammonia by Soil Organisms. See Carbon Dioxide, etc., 225–241
Nitrate, nitrogen in the soil, the effect of heat on, 200–208
Nitrate of soda, availability of nitrogen in, 291–301
Nitrification, as affected by oxidation of sulfur, 319–321
Nitrification of ammonium phosphate, 5–15
Nitrogen—
  Distribution of Fibrin Hydrolyzed in Presence of Ferric Chloride (paper), W. R. Fetzer and C. A. Morrow, 163–167
  ferric chloride, the nitrogen distribution of fibrin when hydrolyzed in the presence of, 163–167
  fibrin, nitrogen distribution of, 163–167
  in Nitrate of Soda, Ammonium Sulfate, Dried Blood and Farm Manures, Twenty Years' Work on the Availability of (paper), J. G. Lipman and A. W. Blair, 291–301
  soluble non-protein, in the soil, the effect of heat on, 200–210
  transformations as related to sulfofication, 311, 321
Nitrogenous Constituents of Soil, The Effect of Heat on (paper), R. S. Potter and R. S. Snyder, 197–212
Nitrogenous fertilizers—
  comparative availability of, 20–51
  effect of, on germination and plant growth, 67–77
  nitrification of, in soil, 5–15
Noyes, H. A., and Yoder, L. (paper), Carbonic Acid Gas in Relation to Soil Acidity Changes. See Carbonic Acid Gas, etc., 151–161

Osmotic—
  concentration of the soil solution, 440–450
  requirement of cultures, 127
Osugi, S., Rice, F. E., and (paper), The Inversion of Cane Sugar by Soils and Allied Substances and the Nature of Soil Acidity. See Inversion of Cane Sugar, etc., 333–358
Oxidation—
  of sulfur, 313–316
  of Sulfur by Microorganisms in its Relation to the Availability of Phosphates, The (paper), H. C. McLean. See Sulfur, The Oxidation of, etc., 251–290

Peat, effect on the accumulation of available phosphoric acid from floats and sulfur-floats combinations, 282–284
Peat Soils, Determination of Lime and Phosphoric Acid in, Comparison of Jönköping with Bremen Method (paper), C. O. Rost and F. C. Clapp, 213–218
  Bremen method, 213
  comparison of methods, 215–216
  completeness of recovery of lime and phosphoric acid, 216–217
  data obtained by C. von Feilitzen, 214–215
  Jönköping method, 214
Peptone, effect on the accumulation of available phosphoric acid from floats and sulfur-floats combinations, 284–285
Phosphate fertilizers—
  availability in soils, 56–61
  availability in quartz sand, 61–62
Phosphates—
  insoluble, action upon by sulfur, 266–268

The Oxidation of Sulfur by Microorganisms in its Relation to the Availability of (paper), H. C. McLean. See Sulfur, The Oxidation of, etc., 251–290
Phosphoric acid—
effect on the accumulation of available phosphoric acid from floats and sulfur-floats combinations, 273–274
determination of, in peat soils, 213–218
Physical classification of soils and chemical composition, 414–416
Physical texture of soils and chemical criteria, 407
Plant competition as affected by soil acidity, 174
Plant diseases as affected by soil acidity, 173–174
Potassium Requirements of Bacteria (paper), G. P. Koch, 219–224
Potter, R. S., and Snyder, R. S. (paper), The Effect of Heat on Some Nitrogenous Constituents of Soil. See Heat, Effect of, etc., 197–212
Potter, R. S., and Snyder, R. S. (paper), The Production of Carbon Dioxide by Molds Inoculated into Sterile Soil, 359–377
Protozoa, A Method for the Counting of Certain, in the Soil (paper), A. Itano and G. B. Ray, 303–310

Ray, G. B., Itano, A., and (paper), A Method for the Counting of Certain Protozoa in the Soil, 303–310
"Rawness," The Relative, of Some Humid Subsoils (paper), P. M. Harmer, 393–402
Rhizopus nigricans, production of carbon dioxide by, 362–375
Rice, F. E., and Osugi, S. (paper), The Inversion of Cane Sugar by Soils and Allied Substances and the Nature of Soil Acidity. See Inversion of Cane Sugar, etc., 333–358
Richmond, T. E. (paper), On the Extraction of Ammonia from Soil. See Ammonia, On the Extraction of from Soil, 481–486
Richmond, T. E., Ames, J. W., and (paper), Sulfofication in Relation to Nitrogen Transformations. See Sulfofication, etc., 311–321
Root tissues of plants, as affected by soil fertility, 176–179

Rost, C. O., and Clapp, F. C. (paper), Determination of Lime and Phosphoric Acid in Peat Soils: Comparison of Jönköping with Bremen Method. See Peat Soils, etc., 213–218

Sand cultures, 55
Sassafras light sandy loam, effect of moisture content on the growth of barley, 434–440
Sea sand, effect of moisture content on the growth of barley, 427–434
Shive, J. W. (paper), Toxicity of Monobasic Phosphates towards Soybeans grown in Soil- and Solution-Cultures. See Toxicity of Monobasic Phosphates, etc., 87–122
Snyder, R. S., Potter, R. S., and (paper), The Effect of Heat on Some Nitrogenous Constituents of Soil. See Heat, Effect of, etc., 197–212
Snyder, R. S., Potter, R. S., and (paper). The Production of Carbon Dioxide by Molds Inoculated into Sterile Soil, 359–377
Sodium nitrate, comparative availability in sand cultures, 55
Soil, the effect of heat on some nitrogenous constituents of, 197–212
Soil acidity, a method for determination of relative, 353
Soil acidity: I. Its relation to growth of plants (paper), 169–195
effect on availability of calcium, 174–175
effect on plant competition, 174
effect on prevalence of plant diseases, 173–174
effect on symbiotic nitrogen-fixing bacteria, 175–176
effect on the general fertility, 170–173
effect on the root tissues of plants, 176–179
lime requirements of plants, 179–191
liming acid soils, 183–191
relation of lime requirements of plants to their degrees of response to liming acid soils, 183–191

relation of soil acidity to the lime requirement of plants, 181–182
relation of soil fertility to the lime requirements of plants, 182
Soil Acidity Changes, Carbonic Acid Gas in Relation to (paper), H. A. Noyes and L. Yoder. See Carbonic Acid Gas, etc., 151–161
Soil acidity, The Inversion of Cane Sugar by Soils and Allied Substances and the Nature of (paper), F. E. Rice and S. Osugi. See Inversion of Cane Sugar, 333–358
Soil emulsion, production of carbon dioxide by, 362–375
Soil extracts, the character of, 336–338
Soil fertility, its relation to the lime requirements of plants, 183
Soil fungi, utilization of ammonium phosphate by, 18–19
Soil Organisms, Studies on the Correlation between the Production of Carbon Dioxide and the Accumulation of Ammonia by (paper), J. R. Neller. See Carbon Dioxide, Studies on, etc., 225–241
Soil protozoa, a method for counting of, 303–310
Soil reaction—
effect of fertilizers on, 51–54
the effect of CaO and $CaCO_3$ on, 379–382
Soils, The Inversion of Cane Sugar by, and Allied Substances and the Nature of Soil Acidity (paper), F. E. Rice and S. Osugi. See Inversion of Cane Sugar, etc., 333–358
Soybeans, effect of ammonium sulfate in nutrient solution on the growth of, in sand cultures, 123–150
Subsoils, The Relative "Rawness" of Some Humid (paper), P. M. Harmer, 393–402
properties of the soils, 394–396
